

READING GEEK NIGHT

FREE

COPA BAR (DOWNSTAIRS)

MONDAY, 7 DECEMBER 2009 7:30PM

Luke Smith A SOLID Introduction SOLID is a set of principles to guide you in managing the dependencies within your applications. This talk gives a brief introduction to the SOLID principles and demonstrates how, by keeping them in mind when writing Object Orientated code, you can make your application more maintainable and flexible.

Pete Doyle Autism can't be cured so why bother? Currently it is estimated that 1 in 100 people have autism in the UK..Men are 4 times more likely to show signs of autistic behaviour than women. Kids on the autism spectrum need specialist care to do everyday things that we take for granted. So why is it then that in some cases autistic people have a superior intellectual skill? The talk will focus on autism, and challenge Reading Geeks to answer two questions... "How could technology make a difference?" and "What can we practically do to make that technology a reality?"

Simon Cobb Making it. Ideas I have stolen from other people. A whirlwind tour through Simon's favourite quotes and ideas on how to make almost any kind of stuff (but mostly he uses them to build internet stuff).
